

ABSTRACT:

5 An interactive translation system (10) includes a front
end (40), a back end (42), and a user interface (16). The
front end (40) is operable to identify source elements (86) in
a source file (24). The back end (42) is operable to generate
a translation file having translation elements corresponding
to translation of said identified source elements (86) and
having an interface (16) for receiving inputs for modifying
10 said translation.
